# HOW TO INSTALL THE ANTI-TIP BRACKET

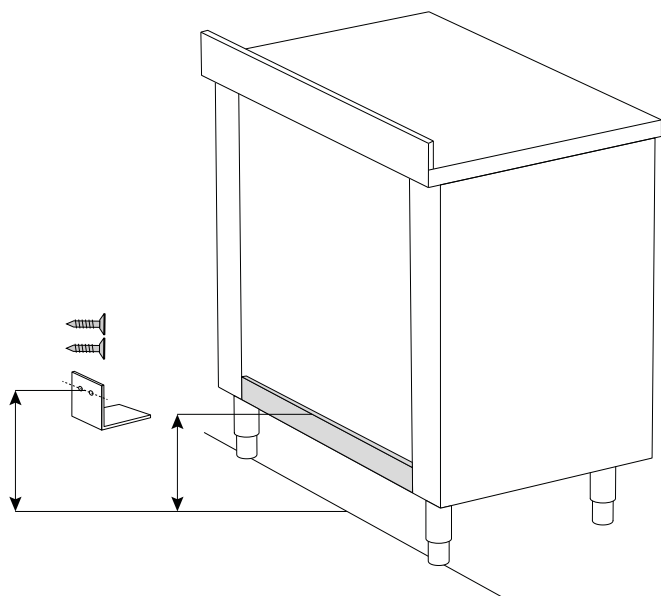

## WARNING

A child or adult may tip over the device and be killed. Install the anti-tip device on the structure and/or polygon (see pictures for details).

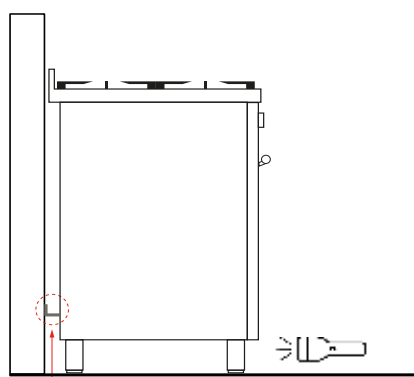

### OPTION 1: wall bracket

1. Unpack the kitchen, mount the feet and adjust the height.
2. Measure the height from the floor to the top edge of the rear cross bar and add 15 mm.
3. Mark the total height on the back wall in the center of the width of the kitchen. Drill two holes and install the mounting bracket.

**CAUTION:** Make sure the stove is leaning against the back wall to prevent it from tipping over.

After removing the drawer, or the panel under the door, using a flashlight, verify that the anti-tip bracket has been installed properly.

Anti-tip bracket

### OPTION 2: floor mounted bracket

**ATTENTION:** in this case 2 brackets are needed

1. Hook the apparatus onto the anti-tip device as explained in the picture.
2. Reinsert the anti-tip device if the apparatus is moved.
3. See pictures for details.
4. Failure to follow this procedure may result in death or serious burns to children or adults.
